

eCONTARGO  
the zero emissions way

Jürgen Albersmann, CEO Contargo

## “We are switching to real Green.”

The consequences of climate change are already being clearly felt. Feasible solutions are urgently needed to reduce as fast as possible the growing CO<sub>2</sub>e emissions\* in our sector caused by the increase in goods transports. We, too, as one of Europe's leading trimodal hinterland container logistics networks, feel it is our responsibility to present real solutions in order to proactively drive the transport change, together with you as our customers.

\*We use CO<sub>2</sub>e instead of just CO<sub>2</sub>:

Compared to CO<sub>2</sub> the unit CO<sub>2</sub>e also includes the climate impact of 6 other greenhouse gases, such as nitrous oxide and methane. These greenhouse gases are between 25 and 22800 times more damaging to the climate than CO<sub>2</sub> and therefore we also include them in in our climate balance for the greatest possible transparency.

# The zero emissions way

## Really green?

For Contargo, merely compensating our CO<sub>2</sub>e emissions will not do! **With econtargo, our new green product created for you, we offer the first one-stop shop solution for the transport transformation of the future.** Thus hand in hand, we create a basis for pursuing climate neutrality – the zero emissions way!

Avoidance before reduction before compensation! Thanks to our strict orientation towards the PAS2060 certification standard for climate neutrality, we guarantee implementation of our own carbon management system. This means we are committed to avoiding and reducing more CO<sub>2</sub>e every year.

## Book now!

**Book our green product, and together we will make sure that emissions are not generated in the first place.**

**We avoid**  
46 %\* of CO<sub>2</sub>e emissions  
by combined transport  
with barge, rail and truck

**46%**

**We reduce**  
42 %\* of CO<sub>2</sub>e emissions  
by using e-trucks,  
green electricity for  
terminals and rail

**42%**

**12%**

## We compensate

We are now compensating only a small percentage\* (12 %) of our emissions. For this, we select projects recognised by PAS 2050. We are making great efforts to constantly reduce this percentage.

\* The percentages given are average values and relate to the equivalent transport carried out by direct truck.

# The green one-stop shop solution

## Climate neutral

Clear overview and attestation of all CO<sub>2</sub>e emissions actually saved.

## Uncomplicated

Your existing transports can simply be switched to the green product.

## Individual and flexible

Solutions individually tailored to your transports.

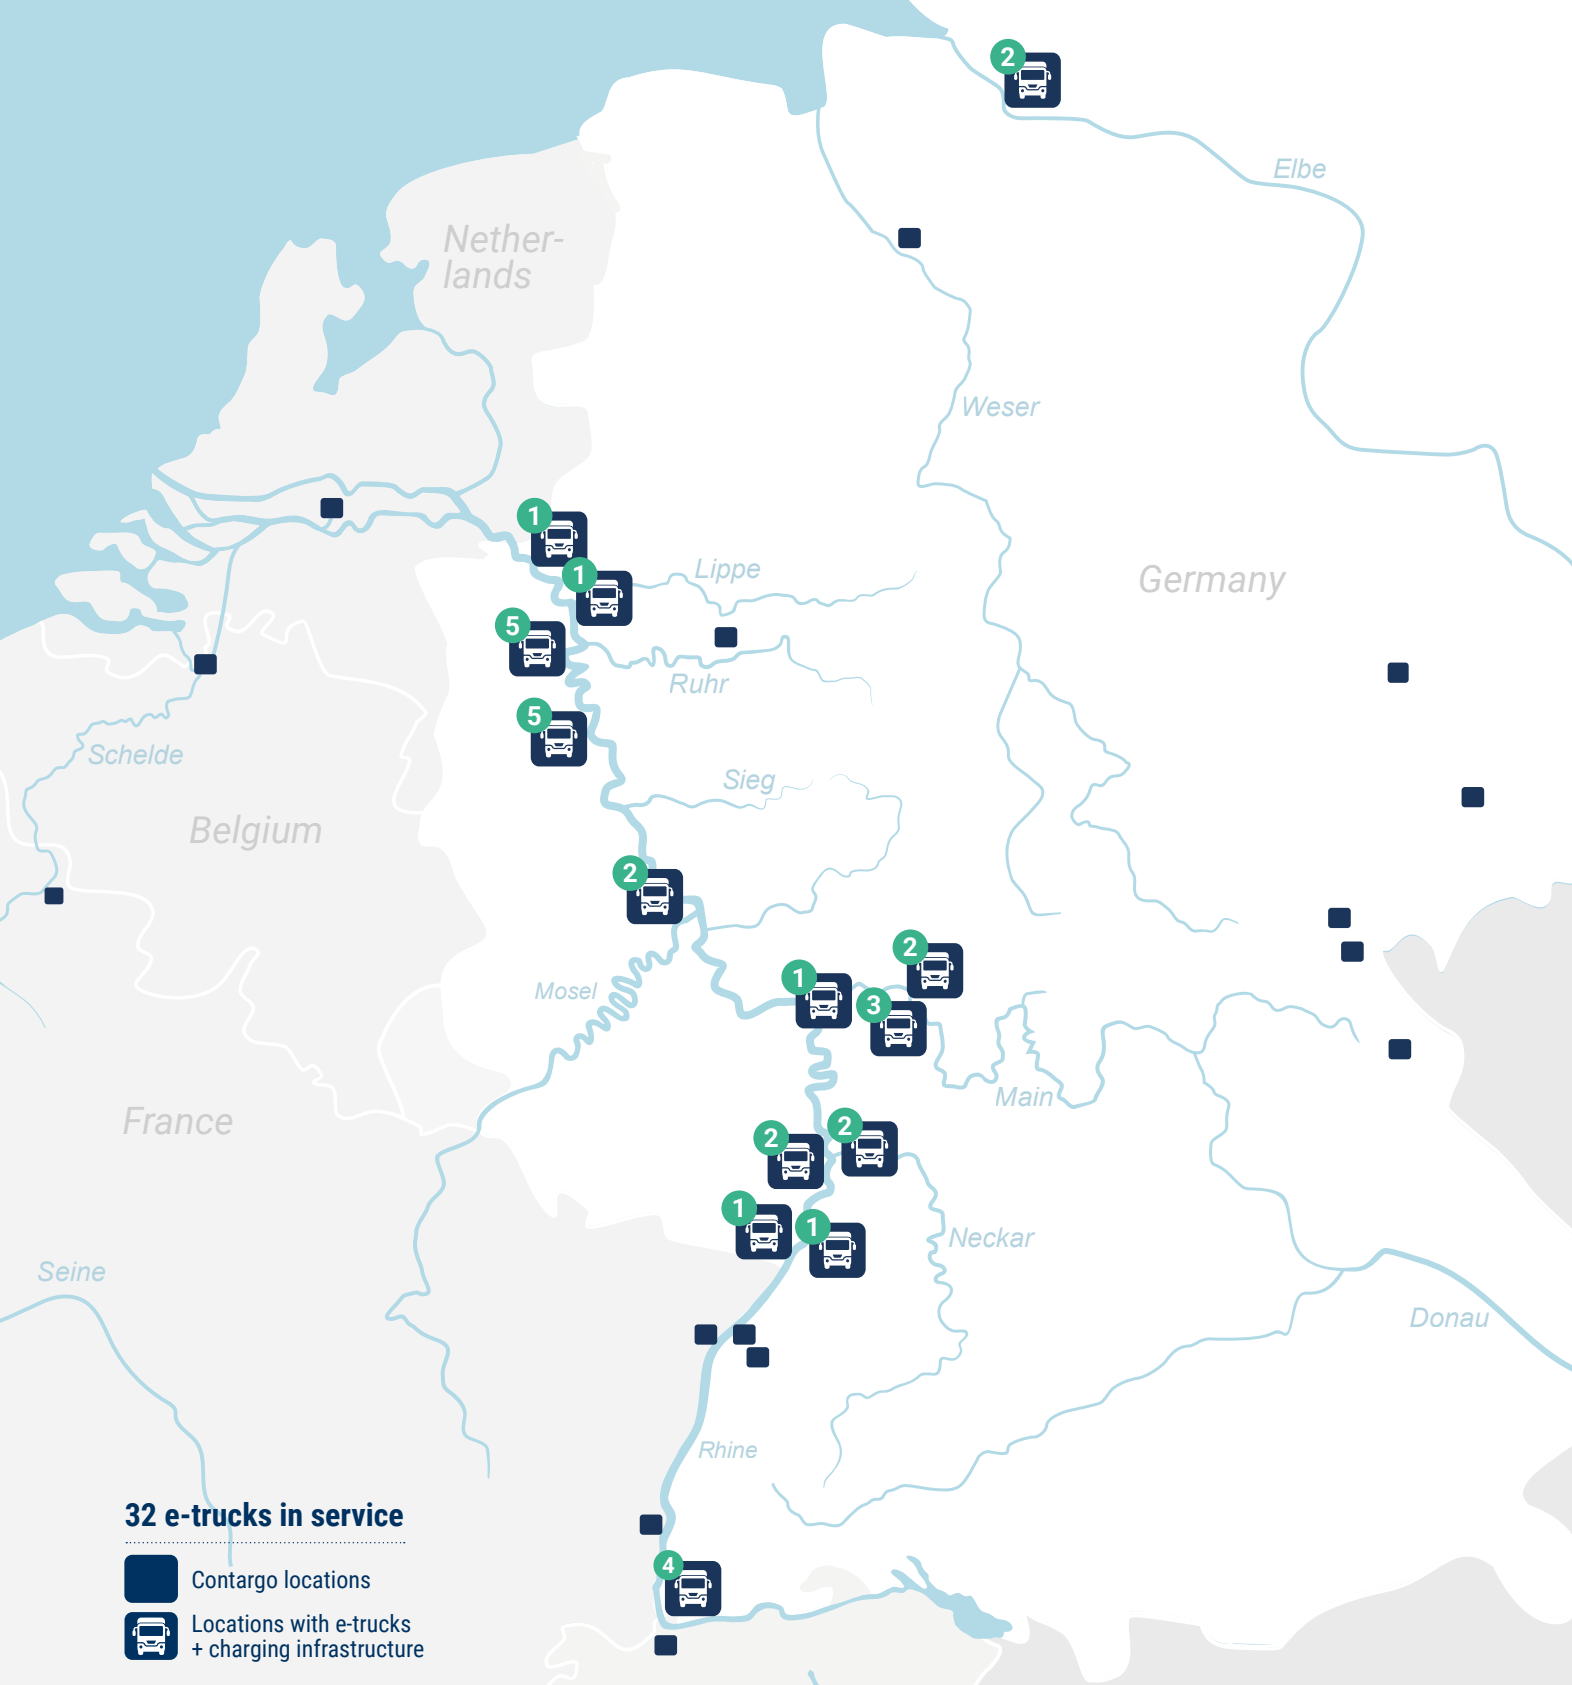

## Plannable

Long-term planning security, thanks to early booking and securing green mileage.

# It's so simple: Green transport for your goods

## E-truck + terminal network – an unbeatable combination

Altogether our Contargo e-truck fleet, consisting of 32 e-trucks, travels 1,560,000 km in one year. We also use trains powered by green electricity for the main run. Our close-knit network of mainly trimodal container terminals plus e-trucks along the Rhine offers many different options and combinations for your transports.

## Simple, flexible and individual

With econtargo, kilometres of our e-trucks and trains can be booked by you very easily and directly. **Whether pre-carriage, on-carriage or main run, let us know which transports you want switched directly to econtargo and we will plan this for you. Your Contargo contact will be happy to advise you!**

## Reliable transport, thanks to Germany's biggest private charging infrastructure for heavy e-trucks

Another milestone on the way to decarbonisation is the development of our own forward-looking, high-performance charging infrastructure.

33 charging points, each with an output of 250 kW, guarantee comprehensive, flexible

use of our e-trucks for local container transports, where they perform as well as their diesel equivalents in every way. Thus we offer you, as our customer, a reliable and future-oriented service.

## The trimodal Contargo Network

Contargo integrates container transport between the western seaports, the German North Sea ports and the European hinterland. As a strong network of modern container terminals with our own barge and rail lines and a truck / e-truck fleet, we offer sustainable transport solutions and occupy an ongoing position as pioneers in our sector.

# Competitive advantage

## Better transports with **econtargo**

There are already logistics service providers on the market advertising CO<sub>2</sub>e neutrality – so why should you decide in favour of **econtargo**? Because our product does what it promises. It stands for credible climate neutrality. Instead of relying on static avoidance or mere compensation, we actively avoid and reduce CO<sub>2</sub>e emissions!

## Strengthen the sustainable image of your enterprise

Use **econtargo** for your transports and come a big step closer to reaching the climate goals you have set yourself. Not only will you reduce your enterprise's own CO<sub>2</sub>e footprint – you will also reduce Scope 3 emissions\*, which are increasingly the focus of attention.

## The green “must-have” for your customers

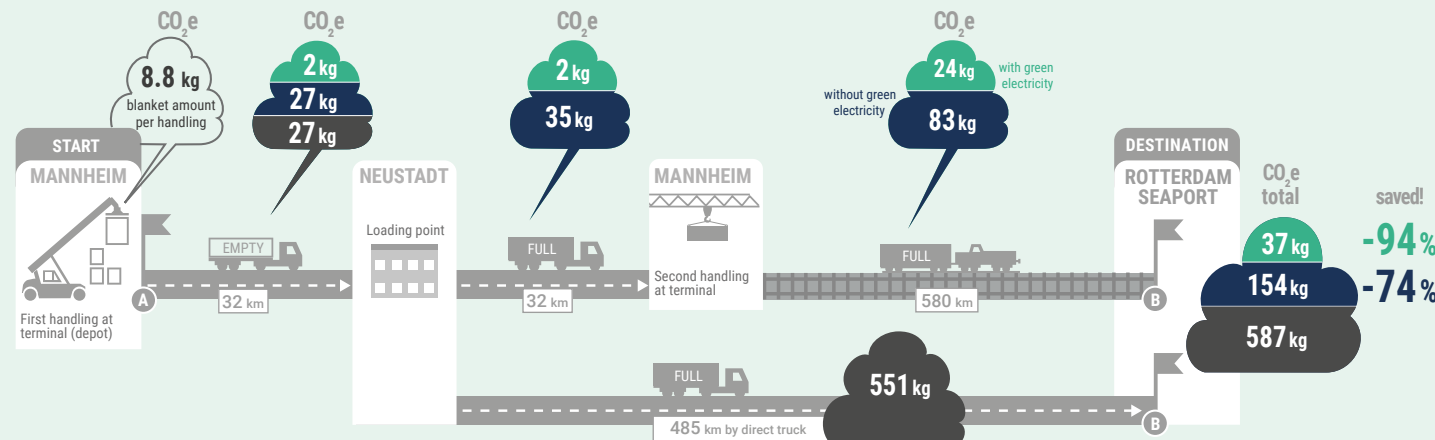

Your customers want green? Then with a good conscience you can offer them a completely green transport chain from the pre-supplier onwards, and gain a real competitive advantage by doing so. With **econtargo**, we guarantee with 100 percent transparency that your Contargo transports will not generate emissions in the first place.

## Our green formula is definitely worthwhile

With **econtargo**, you not only save 88 % of CO<sub>2</sub>e compared to conventional transports using fossil fuels – you also invest in active climate protection.

### **econtargo in comparison** (CO<sub>2</sub>e calculation, example Mannheim-Rotterdam):

- **econtargo**: - 94 % CO<sub>2</sub>e savings compare to direct trucking – a clear climate winner!
- Combined transport: - 74 % CO<sub>2</sub>e savings compared to direct trucking – climate friendly!
- Direct truck: Only used by us in exceptional situations, when really necessary.

The calculation example shows the CO<sub>2</sub>e consumption during the transport of a container from Mannheim to Rotterdam.

## -7 kg CO<sub>2</sub>e

With every Euro you invest in our green product, you help to ensure that an average of 7 kg CO<sub>2</sub>e is no longer emitted into the atmosphere.

\*Scope 3 emissions are caused by business activity but are not under the control of the enterprise itself. They are generated for example by suppliers, service providers and employees.

“With **econtargo**  
we set new  
standards for  
**green logistics!**”

**Kristin Kahl**  
Sustainable Solutions at Contargo

# We can only achieve decarbonisation together

## Become a climate neutrality pioneer!

With **econtargo** you are not booking just any transport service – your enterprise is taking up a real pioneering role in climate neutrality. Seldom has a sector been so intensively at the focus of change as the transport sector is today. This gives you the chance to spearhead a climate-neutral logistics movement and take

a proactive part in progress. As a pioneer of climate-neutral transport, not only do we offer you the unique opportunity to use one of the first really green products – together, we also form an exclusive circle of Reducers and Avoiders who stand for sustainable logistics, and for a world that our grandchildren will be able to enjoy.

Our Sales Team will be glad to advise you on **econtargo** and make you an individual offer.

## We are certified.

At the end of the year, we issue an official certificate to each customer attesting the climate-neutral transport of their goods with **econtargo** and the CO<sub>2</sub>e emissions saved as a result.

Conformity certificate

Contargo is a proud member  
of Klimaschutz-Unternehmen e. V.

Thanks to our commitment to reducing CO<sub>2</sub>e in the transport sector,  
in 2022 Contargo became the first enterprise in the logistics sector  
to be accepted as a member of Klimaschutz-Unternehmen e.V.
