

COLA VISION

LOGISTICS-THE FUTURE WAY

OFFERS & PRICING

Your container needs to go from A to B? Start off with our first COLA module OFFERS & PRICING. Here, you can use our IMTIS¹⁾ software. This always calculates the current transport price in combined transport for you at the time of your inquiry. You can choose interactively between different transport modes and seaports. (Read more about IMTIS on the back page of this brochure)

BOOKING

Directly after confirming the offer, an appropriate order is created in BOOKING. Thanks to optimal intercommunication of the system modules, all details and information for the complete transport chain are taken over directly and accurately, and other services are added as necessary. Now a tracking ID is assigned, enabling you to track the progress of the order in real time.

DISPO

At all times, our DISPO has the best overview of transports along the whole supply chain that are scheduled, current or have already been completed. Via the Truckers Trust App, truck drivers communicate when they arrive at the loading point, when loading/unloading commences, and when they leave again. This data is shown in our dispatch in real time. This ensures high planning security and means deadlines can be reliably met.

SELF CARE

With a valid reference – checked by ERIS³⁾ beforehand – our truck drivers can use their personalized driver's card with a QR code to check themselves in for the delivery and collection of empty and full containers in the SELF CARE area of our terminals. This avoids long waiting times and tailbacks at the check-in. If a driver needs assistance in using the system, one of our specialists will be pleased to help.

TOS (Terminal Operating System)

TOS digitally records all activities of the container in the terminal. Our machine operators transmit their container movements via the TOS Mobile App to the COLA system in real time. Manual input is reduced to a minimum. This enables fast container processing times. The information provided by the order allows us to adhere reliably to service orders.

INTERMODAL GATE

Here the container is handed over for transport by barge, rail or in some cases direct trucking. This is the point at which the transfer of risk takes place. At gate-out time at the INTERMODAL GATE, low water surcharges (LWS) and exact arrival times can be represented in real time. Your container leaves our last operative Cola module and makes its way to the seaport.

API: TRACKER
TRACKING ID

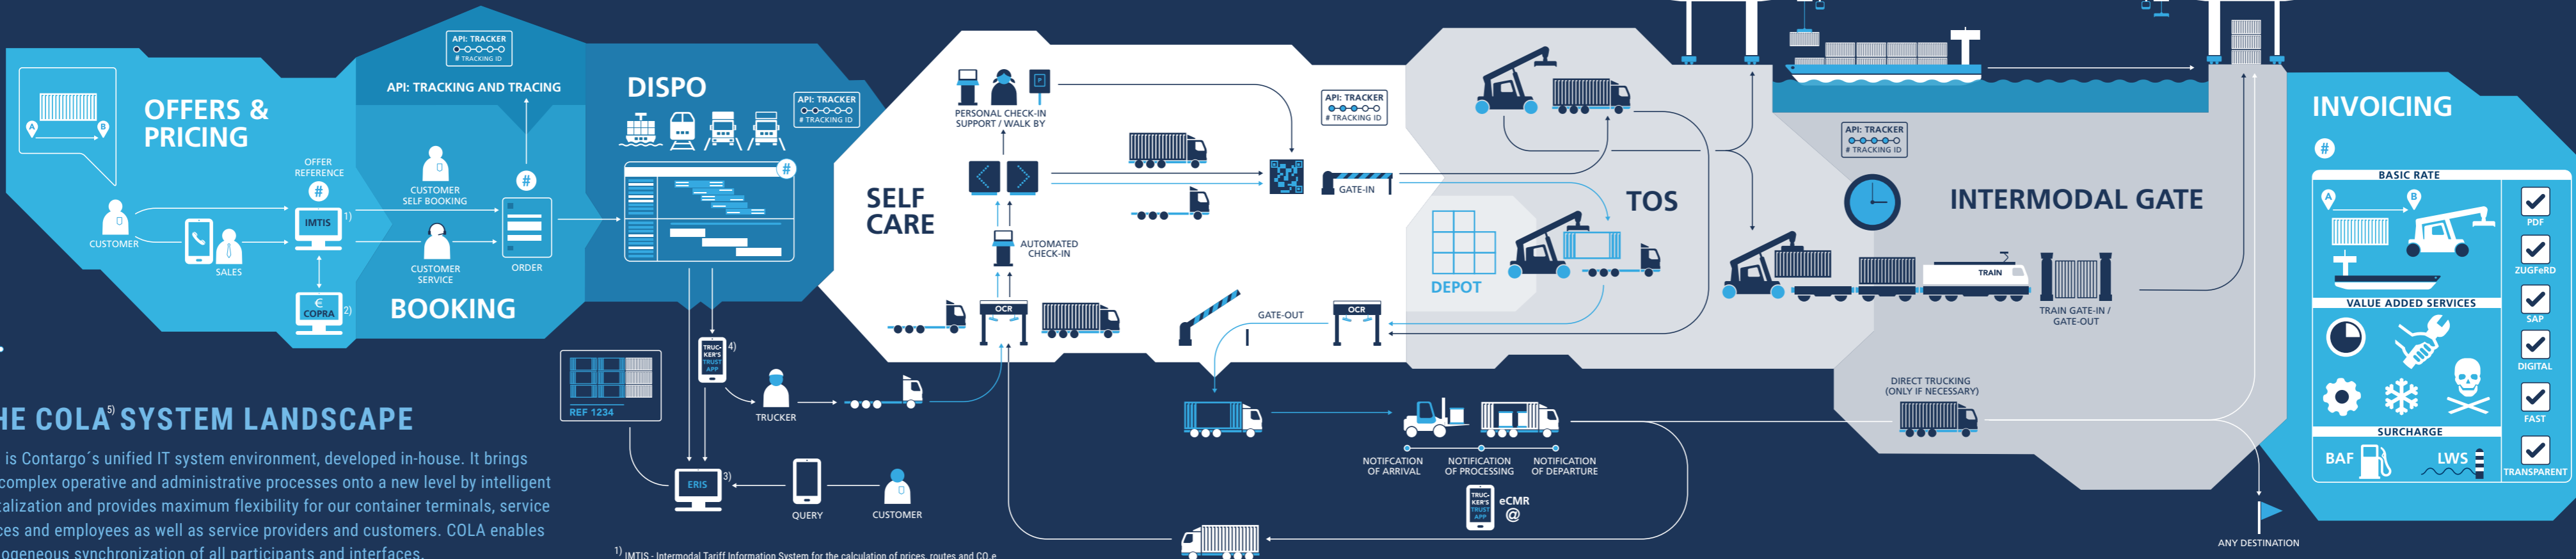

Your container has arrived at its destination!

Thanks to TRACKING & TRACING, the whole transport chain from booking to arrival is monitored in real time.

INVOICING

Your container has arrived at its destination. Thanks to the permanent digital recording of all transport steps, all the services we have provided are already listed in the INVOICING module and can now be directly and precisely billed. A detailed and traceable invoice with transparent itemizing of all the services rendered enables fair billing and ensures clarity.

COLA VISION
at a glance

THE COLA⁵⁾ SYSTEM LANDSCAPE

This is Contargo's unified IT system environment, developed in-house. It brings our complex operative and administrative processes onto a new level by intelligent digitalization and provides maximum flexibility for our container terminals, service offices and employees as well as service providers and customers. COLA enables homogeneous synchronization of all participants and interfaces.

- 1) IMTIS - Intermodal Tariff Information System for the calculation of prices, routes and CO₂e
- 2) COPRA - Contargo Prices and Rates: Contargo's datenbase for prices and quotations
- 3) ERIS - Equipment and Reference Information System: Application for checking pick-up / turn-in references
- 4) Trucker's Trust: Application for digital interaction between truck drivers and dispatch in real time
- 5) COLA - Contargo Open Logistics Apps: Contargo's self-developed IT system environment

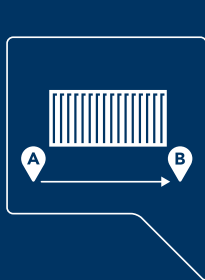

FAST // FLEXIBLE // SECURE // TRANSPARENT // PROCESS TRACKING IN REAL TIME

IMTIS

GET YOUR INDIVIDUAL PRICE INFORMATION IN JUST A FEW STEPS

Our IMTIS (Intermodal Tariff Information System) software was developed in-house, based on open source. Designed to calculate tariffs, routes and CO₂e quantities, it represents the first step for customers and partners in our innovative COLA world. In calculations IMTIS provides a variety of detailed options and always finds the best transport solution for you, tailored to your individual requirements. Right from the beginning, the whole COLA system works continually in the background to ensure that your container arrives at its destination safely, smoothly and punctually, in the way that is best for the environment.
