**MODAL SPLIT AT CONTARGO**

When transporting large volumes over long distances, Contargo uses barge and rail for the main run. Trucks are primarily used for local door-to-door delivery and collection of customers' containers. Conclusion: In Contargo's modal split the advantages of each transport mode can be optimally utilised.

# OUR CONNECTIONS TO THE SEAPORTS

Contargo integrates container transport between the western seaports, the German North Sea ports and the European hinterland. As a strong network of modern container terminals, with our own barge and rail lines and a truck / e-truck fleet, we offer sustainable transport solutions in combined transport, and occupy an ongoing position as pioneers in our sector.

## TRANSPORT CAPACITY OF CONTARGO'S FLEET

Contargo's permanent fleet comprises 40 motorised inland vessels and 15 towed barge units, with a total transport capacity of 15,772 TEU. Approximately 10,514 truck transports would be needed to transport the same quantity of goods by direct trucking. **Conclusion: Barge transports free up the roads and are eco-friendly.**

68 whole trains run every week for Contargo, transporting 5,900 TEU. If the same quantity were transported by direct trucking, 3,478 transports would be needed. **Conclusion: Train transports save time for Contargo and generate considerably less CO<sub>2</sub>e.**

**econtargo**, Contargo's emission-reduced product, offers the first one-stop shop solution for the transformation – flexibly bookable, with planning reliability. Altogether 90 fully electric trucks perform the "last mile" transport (pre- and on-carriage) of your goods. They are powered by green electricity drawn directly from 90 fast charging points installed at 16 locations. The main run is by rail or by barge with electric motor. **Thus econtargo saves up to 94 % CO<sub>2</sub>e compared to transports by conventional direct trucking.**
